MEMORANDUM FOR:

VIA:

FROM:

SUBJECT: Secure Bridge Requirements

Currently Wang contractors are installing Wang cabling in the New Headquarters Building. With emphasis on the secure and non-secure grid system, metal bridges have been provided by NHB/OL to ensure physical separation of secure and non-secure cabling at intersecting hallways, congested areas around the secure closets, etc.

STAT

Not so. remove out with OIT/ILS
NBPO/OL was notified by Support Staff /ID/OIT that there would be additional requirements for the secure bridges. OL/NBPO *- 00006*
Proc 100a
[redacted] agreed that OL would provide the bridges and have a stock to draw from if required. There is a urgent requirement for additional metal bridges based on existing and future requirements.

In a recent meeting with representatives from OIT/NBCPD, Support Staff/
Installation Division, and contractors from ACC and CONTEL, they both voiced an immediate requirement for the bridges.

A concern for not having the secure bridges would be the Security guidelines for the New Headquarters building on having a physical separation of the non-secure and secure cabling. This not only applies to Wang cabling, but to all ADP cabling that will be installed under the raised floor in the New Headquarters building following the secure and non-secure grid network.
